

Multi-source Feedback
(ST3/5 and ST5/7 trainees)
Assessor nomination guidance

This guidance is also relevant to Oral and Maxillofacial Pathology trainees.

Trainees must choose assessors from a predefined list:

1. Consultant in same specialty
2. Consultant outwith specialty
3. StR in same specialty
4. Trainee outwith specialty
5. Clinical scientist
6. Senior biomedical scientist
7. Nurse/allied health professional
8. Anatomical pathology technologist
9. Pharmacist
10. Admin or clerical staff member
11. Other (particularly for Forensic Pathology practitioners)

Up to 12 assessors (minimum 10) must be chosen. An assessor must be someone whom you work with on a regular basis and who is able to comment on your performance. Your choice of assessor should reflect your current practice.

You may choose more than one assessor in each category. You do NOT need to choose an assessor from each available category e.g. if you do not have close working relationships with nursing staff do not include them as assessors.

When choosing assessors from the above list you must choose less than three assessors currently in training within or outwith your specialty. You must include your supervising consultant(s) in your list of assessors.

The type and number of assessor you select will be listed on your MSF report.

It is strongly recommended that you:

- check with potential assessors in advance to ensure they are available to complete the assessment in the 4 week period
- when entering email addresses of unlisted assessors on the LEPT system, do carefully check the details to ensure they are correct.
