

EVALUATION OF CLINICAL/MANAGEMENT EVENTS (ECE)

Guidance for assessors and trainees in chemical pathology

What is evaluation of clinical/management events?

Evaluation of clinical/management events (ECE) is a tool used for assessing the trainee in the performance of their duties in complex tasks, often involving teamworking or interacting with other professional staff. Examples include clinicopathological evaluation and reporting of diagnostic material, presentation of a case at a multidisciplinary team (MDT) meeting, or contributing to quality assurance and audit processes in clinical and laboratory settings.

The assessment takes place whilst the trainee undertakes the activity then the assessor will then spend 5-10 minutes providing immediate feedback. The assessor will complete the assessment form as soon as possible after the assessment takes place with the trainee present.

The assessment is performed against the standard expected at the end of the trainee's current stage of training (A to D). Please see the section below for more information on the standards for assessment.

- ▶ [Purpose of assessment tools](#)

Suitable events

Examples of areas suitable for ECE are:

- presenting audit findings and leading discussion on the action required
- observation of a trainee-led teaching event
- demonstration and presentation of cases at multidisciplinary team meetings
- presentation at 'grand round'
- referring a case for a specialist opinion
- providing clinical biochemistry advice in response to enquiry (primary and secondary care) – by letter, by phone
- use of critical incident/non-conformity reporting procedures
- presenting findings and leading discussion on the action required
- preparing a business case
- writing clinical guidelines
- appointment of staff (e.g. shortlisting, interviewing).

These procedures should be carried out for a wide variety of specimen types, refer to topics in the curriculum.

Who can be an assessor?

Assessors can be consultants (medical or clinical scientist), staff grade and associated specialists (SAS), senior biomedical scientists (BMS), clinical scientists, a more senior trainee or other healthcare professionals competent in the area being assessed (e.g. nurses). Assessors do not need prior approval from the College or prior knowledge of the trainee but should be briefed about the standard required of the stage of training (see curriculum). For optimum reliability, assessments should be undertaken by as many different assessors as possible. Trainees are encouraged to include assessments from a broad range of consultants and senior staff.

How does the assessment work?

The process is led by the trainee who chooses the event for discussion and the assessor. However, over time the assessments should cover a broad range of events and a range of assessors.

The process is a structured discussion between trainee and assessor, with the trainee talking through what occurred, considerations and reasons for actions. It should take no longer than 15–20 minutes, followed immediately by feedback lasting about 5-10 minutes.

At the end of the discussion, an ECE form should be completed with the trainee present. Workplace-based assessments should be recorded in the [Learning Environment for Pathology Trainees \(LEPT\) system](#). The LEPT system is an ePortfolio to capture trainees' progress during training. It records workplace-based assessments including multi-source feedback (MSF) and includes a functionality to support the [Annual Review of Competence Progression \(ARCP\)](#) process. However, the printable workplace-based assessment forms on the College website will still be available, for instances when trainees/assessors do not have direct access to a PC/internet when the assessment is being conducted. In such cases, it is expected that the forms will be used to record the assessment with the intention of transferring the contents to the LEPT system either by the trainee or assessor.

Standards for assessment

Trainees must be assessed against the standard expected of a trainee at the end of the stage of training that they are in. Stages of training are normally defined as:

- Stage A** – ST1 (full outline of competency is available in curriculum). The trainee will be developing a comprehensive understanding of the principles and practices of the specialty under direct supervision.
- Stage B** – ST2 and ST3 leading to the Part 1 examination. The trainee will have acquired a good general knowledge and understanding of most principles and practices under indirect supervision.
- Stage C** – ST3 onwards leading to the Part 2 examination. The trainee will be undertaking further specialised general training.
- Stage D** – Meets the requirements of the CCT programme. The trainee will have an in-depth knowledge and understanding of the principles of the specialty.

The following grading scale must be applied to the assessment criteria for each workplace-based assessment tool. If a criterion is not applicable, the assessors should tick 'unable to comment'.

Grading scale

The form offers a grading scale from 1-6:

- 1-2 Below expectations
- 3 Borderline
- 4 Meets expectations
- 5-6 Above expectations

Definition of borderline

In the context of workplace-based assessment, borderline trainees have not demonstrated that they have convincingly met expectations during the assessment but there are no major causes for concern.

Definitions for the grading scales are provided at:

► [Standards for assessment tools](#)

Outcome of assessment

The outcome of the assessment is a global professional judgement of the assessor that the trainee has completed the task to the standard expected of a trainee at that stage.

- Satisfactory - The trainee meets the standard overall
- Unsatisfactory - The trainee needs to repeat the assessment

Feedback

To maximise the educational impact of ECE, aspects of performance that are particularly good as well as those where there is scope for improvement should be discussed with the trainee. Feedback should be given sensitively, in a suitable environment. Areas for development should be identified, agreed and recorded on the ECE form.

Record keeping

An assessment should not be approached as if it was an examination. After completing the assessment, the assessor should provide immediate feedback to the trainee. If the paper-based assessment form was completed in the first instance for entering onto the LEPT system at a later date, then it should be duly signed and dated by the trainee and the assessor. Trainees are asked to check with their local arrangements whether they are required to give a photocopied version of the form to their educational supervisor/assessor and/or retain the original copy of the form in their portfolio for possible presentation to the ARCP panel.

Thank you for discussing the event and providing feedback.
